

Sales, Target & Performance Analysis Dashboard | Power BI Project Report

Project Overview

This project presents a Power BI dashboard developed for analyzing sales performance, profitability, targets, and shipping costs through interactive business intelligence visualizations. The dashboard provides a comprehensive overview of organizational performance and supports data-driven decision making.

Dashboard Preview

Key Performance Indicators

Metric	Value
Total Sales	12.64M
Total Profit	1.47M
Average Shipping Cost	26.38
Sales Target	25.29M

Dashboard Features

- KPI-based business monitoring
- Sales and target comparison analysis
- Country-wise sales visualization using map analytics
- Profit tracking dashboard

- Shipping cost performance analysis
- Interactive business intelligence reporting

Technologies Used

- Power BI
- DAX
- Power Query
- Data Analytics
- Business Intelligence
- Data Visualization

Business Insights

- The dashboard tracks overall sales performance against targets.
- Sales analytics help identify business growth opportunities.
- Profit insights support financial analysis and planning.
- Geographic visualization enables region-wise business understanding.

Conclusion

This dashboard demonstrates how Power BI can be used for business intelligence, performance monitoring, and strategic analysis through interactive visualizations and KPI tracking.
